

Announcing a new milestone in the pest control industry!

Pest Management Academy is proud to announce the launch of the much anticipated "Pest Management Operators Guide". The South African pest control industry now have at its disposal an in depth reference guide that has full colour illustrations of pests that are common to South Africa complete with a short synopsis of the insect, i.e. appearance, biology, damage, control strategies and pesticides that can be utilized to control the target pest. This is a South African resource with South African pests aimed at the South African market. Not an international reference guide that shows pests from overseas that are not found in S.A.

The industry owes Bayer Environmental Science a huge thank you for sponsoring this "Pest Management Operators Guide" which has been printed in full colour gloss print to enable the pest control operator to easily identify insects coupled with Integrated Pest Management control strategies. The guide is a convenient A5 size so that it can fit easily into the cubby hole of any service vehicle or the pest control operator's tool kit.

The "Pest Management Operators Guide" was launched officially last week at a glitzy function at the Bayer Head

Offices in Johannesburg where every person attending received a free first edition copy of the 288 page guide.

Further distribution of the guide will be to all new students enrolling for specialized pest management courses offered at the world class training facility of the Pest Management Academy.

The main aim of this "Pest Management Operators Guide" is to equip the pest control operator in the field with a complete reference guide that can be used for identification of target species, identifying treatment options and employing a management plan to effectively introduce integrated pest management principals. The guide will enhance and develop the knowledge and professionalism of the pest control operator. The guide was designed to be a living resource to be used in the field and not to gather dust on management's bookshelf.

Here's to your success in the Pest Management Industry!
