

## Field Pest Biologist

If you are serious and want to be professional about pest control then the Field Pest Biologist qualification is for you.

The Field Pest Biologist is a qualification based on NQF Level 5 and is the highest pest control qualification you can earn in the field of pest control worldwide. This qualification is aimed at people who are already qualified as pest control operators and who are active in the HACCP/ Food Safety arena and deal with any customers producing or making food including restaurants and supermarkets.

There are certain entry requirements that you must meet to be able to enrol for the course and you need to meet **at least one of these requirements** and these have been expanded to the following;

1. You must have completed your National Certificate in Pest Control.
2. You must have completed any of Pest Management Academy NQF Level 4 courses.
3. You must have a current P Registration number with Department of Agriculture with 3 years experience in the pest control field.

The Field Pest Biologist consists of a full intensive one day training programme at PMA's training facility in Pretoria (or can be conducted at a venue of your choice depending on the amount of students) followed by three months in the field (at your own customers) mentoring programme, during which you will complete a full pest control dossier and thesis which will then culminate with another full day training programme and assessment at Pest Management Academy.

**ENROL TODAY** and become a fully trained and accredited professional with an internationally recognised credential of Field Pest Biologist that will separate you from the rats and mice.
