## Pest Management Academy

### HAVE YOU EVER WONDERED WHAT OUR WEED CONTROL TRAINING PROGRAM ENTAILS?

The Pest Management Academy three day training course on "Weed Control" has been designed to equip your staff with the basic knowledge and skills to perform any weed control challenge.

#### The following Subjects are covered in detail:

1. Safety precautions and the utilization of the correct PPE.
2. Selection and calibration of equipment and how to work out the correct dosage and delivery rates.
3. Identification of Weeds and Declared invaders and how to use the correct i.d. resources.
4. Correct application procedures and techniques.
5. Resistance and the need to put down the correct amount of herbicides/weedkillers.
6. When is the correct time to apply herbicides/weedkillers?
7. What environmental conditions are critical for success, i.e. wind conditions?

Weed Control is one of the more lucrative disciplines considering that five Transnet Weed management tenders closed this week estimated at between R8 000 000 and R9 000 000 each.

After completion the learners will be equipped to perform weed control programs in commercial and industrial environments like road shoulders, railway lines, substations, under paving and even "working for water" programs.
